

Medeco has created an electronic lock system after a growing need for electronic security in the vending industry. With an extensive background in the industry, Medeco is able to offer a solution that meets the physical security requirements of a vending lock, combined with the added feature of electronic access control.

The lock also features a proven Medeco cylinder equipped with a steel shell, bolt and a hardened steel plug face for strength and durability. The NEXGEN product is able to withstand the most abusive forms of attack.

A NEXGEN system is comprised of a high security electronic cylinder, a collection/audit key, and the VendSecure™ software.

| LSI Part No. | "A" | "B" | "C" | Shell Material | Latch Material |
|--------------|-------|-------|-------|----------------|-------------------|
| EL1000 | 1.12" | 1.70" | .702" | Steel | Steel (Spg Bolt) |
